

Bona Expansion Strip 50

Foam Expansion Strip 50 mm, self-adhesive

Bona Expansion strips 50 is a self-adhesion foam strip in order to avoid sound bridges between levelling compounds and building parts.

- Ideal for levelling compound and thin screeds
- Self-bonding easy and quick to install
- Really good adhesion
- Avoids acoustic bridges
- Remains straight on the wall

Technical Data

Product type: PE-Foam with fleece backing and fleece socket (self-bonding)

Dimensions: 20 m x 50 mm, rolls

Material thickness: 5 mm

Storage: Store in a dry place. Prevent before moisture and sun radiation!

Processing

Remove the protection foil and press the self-adhesion feet firmly onto the subfloor. We recommend vacuuming the floor thoroughly before use. This will ensure a proper bonding. Advice: The usage of a customary hand roller ensures an ever better bonding of the self-adhesion strip. For placing the expansion foam around corners cut in the foam for inner corners or cut in the fleece for outer corners. Finally cut through the self-adhesion feet. Cut of remaining material after the leveling compound has been applied and cured.

Areas of usage

Bona Expansion Strips 50 can be used for all subfloors that require a levelling, in particular before the installation of wooden floors, laminate or tiles.

Bona takes only responsibility for the delivered product, no responsibility can be taken for the total installed product. If in doubt, conduct a test or a trial. Observe also other Bona product datasheets.
